Title Fit the Discrete-Time Vector Autoregressive Model for Multiple Individuals

Version 0.0.0.9000

Description Fit the discrete-time vector autoregressive model for multiple individuals using the 'OpenMx' package (Hunter, 2017 <doi:10.1080/10705511.2017.1369354>).

`coef.dtvarmxid` *Parameter Estimates*

Description

Parameter Estimates

Usage

```
## S3 method for class 'dtvarmxid'
coef(
  object,
  alpha = TRUE,
  beta = TRUE,
  nu = TRUE,
  psi = TRUE,
  theta = TRUE,
  converged = TRUE,
  grad_tol = 0.01,
  hess_tol = 1e-08,
  vanishing_theta = TRUE,
  theta_tol = 0.001,
  ...
)
```

Arguments

`object`	Object of class `dtvarmxid`.
`alpha`	Logical. If `alpha = TRUE`, include estimates of the `alpha` vector, if available. If `alpha = FALSE`, exclude estimates of the `alpha` vector.
`beta`	Logical. If `beta = TRUE`, include estimates of the `beta` matrix, if available. If `beta = FALSE`, exclude estimates of the `beta` matrix.
`nu`	Logical. If `nu = TRUE`, include estimates of the `nu` vector, if available. If `nu = FALSE`, exclude estimates of the `nu` vector.
`psi`	Logical. If `psi = TRUE`, include estimates of the `psi` matrix, if available. If `psi = FALSE`, exclude estimates of the `psi` matrix.
`theta`	Logical. If `theta = TRUE`, include estimates of the `theta` matrix, if available. If `theta = FALSE`, exclude estimates of the `theta` matrix.
`converged`	Logical. Only include converged cases.
`grad_tol`	Numeric scalar. Tolerance for the maximum absolute gradient.
`hess_tol`	Numeric scalar. Tolerance for Hessian eigenvalues; eigenvalues must be strictly greater than this value.
`vanishing_theta`	Logical. Test for measurement error variance going to zero.

theta_tol	Numeric. Tolerance for vanishing theta test.
...	additional arguments.

Value

Returns a list of vectors of parameter estimates.

Author(s)

Ivan Jacob Agaloos Pesigan

`converged` *Check Model Convergence*

Description

Evaluate whether OpenMx fit has converged successfully.

Usage

```
converged(object, ...)

## S3 method for class 'dtvarmxid'
converged(
  object,
  grad_tol = 0.01,
  hess_tol = 1e-08,
  vanishing_theta = TRUE,
  theta_tol = 0.001,
  prop = FALSE,
  ...
)
```

Arguments

object	An object of class `dtvarmxid`.
...	Passed to and/or used by methods.
grad_tol	Numeric scalar. Tolerance for the maximum absolute gradient.
hess_tol	Numeric scalar. Tolerance for Hessian eigenvalues; eigenvalues must be strictly greater than this value.
vanishing_theta	Logical. Test for measurement error variance going to zero.
theta_tol	Numeric. Tolerance for vanishing theta test.
prop	Logical. If `prop = FALSE`, a named logical vector indicating, for each individual fit, whether the convergence criteria are met. If `prop = TRUE`, the proportion of cases that converged.

Details

Convergence is defined by three criteria:

1. Status code equals `0L`.
2. The maximum absolute gradient is below `grad_tol`.
3. The Hessian is positive definite with all eigenvalues greater than `hess_tol`.
4. If `vanishing_theta = TRUE`, the model additionally checks that the diagonal elements of the measurement error covariance matrix (Θ) are not vanishingly small, where "small" is defined by `theta_tol`.

Value

For the `dtvarmxid` method: If `prop = FALSE`, a named logical vector indicating, for each individual fit, whether the convergence criteria are met. If `prop = TRUE`, the proportion of cases that converged.

`FitDTVARMxID` *Fit the First-Order Discrete-Time Vector Autoregressive Model by ID*

Description

The function fits the first-order discrete-time vector autoregressive model for each unit ID.

Usage

```
FitDTVARMxID(
  data,
  observed,
  id,
  alpha_fixed = TRUE,
  alpha_free = NULL,
  alpha_values = NULL,
  alpha_lbound = NULL,
  alpha_ubound = NULL,
  beta_fixed = FALSE,
  beta_free = NULL,
  beta_values = NULL,
  beta_lbound = NULL,

)
```

Arguments

data	Data frame. A data frame object of data for potentially multiple subjects that contain a column of subject ID numbers (i.e., an ID variable), and at least one column of observed values.
observed	Character vector. A vector of character strings of the names of the observed variables in the data.
id	Character string. A character string of the name of the ID variable in the data.
alpha_fixed	Logical. If TRUE, the dynamic model intercept vector alpha is fixed. If FALSE, alpha is estimated.
alpha_free	Logical vector indicating which elements of alpha are freely estimated. If NULL, all elements are free. Ignored if alpha_fixed = TRUE.
alpha_values	Numeric vector of values for alpha. If alpha_fixed = TRUE, these are fixed values. If alpha_fixed = FALSE, these are starting values. If NULL, defaults to a vector of zeros.
alpha_lbound	Numeric vector of lower bounds for alpha. If NULL, no lower bounds are set. Ignored if alpha_fixed = TRUE.
alpha_ubound	Numeric vector of upper bounds for alpha. If NULL, no upper bounds are set. Ignored if alpha_fixed = TRUE.
beta_fixed	Logical. If TRUE, the dynamic model coefficient matrix beta is fixed. If FALSE, beta is estimated.
beta_free	Logical matrix indicating which elements of beta are freely estimated. If NULL, all elements are free. Ignored if beta_fixed = TRUE.
beta_values	Numeric matrix of values for beta. If beta_fixed = TRUE, these are fixed values. If beta_fixed = FALSE, these are starting values. If NULL, defaults to a zero matrix.
beta_lbound	Numeric matrix of lower bounds for beta. If NULL, defaults to -1.5. Ignored if beta_fixed = TRUE.
beta_ubound	Numeric matrix of upper bounds for beta. If NULL, defaults to +1.5. Ignored if beta_fixed = TRUE.
psi_diag	Logical. If TRUE, psi is diagonal. If FALSE, psi is symmetric.
psi_d_free	Logical vector indicating free/fixed status of the elements of psi_d. If NULL, all element of psi_d are free.
psi_d_values	Numeric vector with starting values for psi_d. If NULL, defaults to a vector of ones.
psi_d_lbound	Numeric vector with lower bounds for psi_d. If NULL, no lower bounds are set.
psi_d_ubound	Numeric vector with upper bounds for psi_d. If NULL, no upper bounds are set.

psi_l_free	Logical matrix indicating which strictly-lower-triangular elements of psi_l are free. Ignored if psi_diag = TRUE.
psi_l_values	Numeric matrix of starting values for the strictly-lower-triangular elements of psi_l. If NULL, defaults to a null matrix.
psi_l_lbound	Numeric matrix with lower bounds for psi_l. If NULL, no lower bounds are set.
psi_l_ubound	Numeric matrix with upper bounds for psi_l. If NULL, no upper bounds are set.
nu_fixed	Logical. If TRUE, the measurement model intercept vector nu is fixed. If FALSE, nu is estimated.
nu_free	Logical vector indicating which elements of nu are freely estimated. If NULL, all elements are free. Ignored if nu_fixed = TRUE.
nu_values	Numeric vector of values for nu. If nu_fixed = TRUE, these are fixed values. If nu_fixed = FALSE, these are starting values. If NULL, defaults to a vector of zeros.
nu_lbound	Numeric vector of lower bounds for nu. If NULL, no lower bounds are set. Ignored if nu_fixed = TRUE.
nu_ubound	Numeric vector of upper bounds for nu. If NULL, no upper bounds are set. Ignored if nu_fixed = TRUE.
theta_diag	Logical. If TRUE, theta is diagonal. If FALSE, theta is symmetric.
theta_fixed	Logical. If TRUE, the measurement error matrix theta is fixed to SoftPlus(theta_d_values). If FALSE, only diagonal elements are estimated (off-diagonals fixed to zero).
theta_d_free	Logical vector indicating free/fixed status of the diagonal parameters theta_d. If NULL, all element of theta_d are free.
theta_d_values	Numeric vector with starting values for theta_d. If theta_fixed = TRUE, these are fixed values. If theta_fixed = FALSE, these are starting values. If NULL, defaults to an identity matrix.
theta_d_lbound	Numeric vector with lower bounds for theta_d. If NULL, no lower bounds are set.
theta_d_ubound	Numeric vector with upper bounds for theta_d. If NULL, no upper bounds are set.
theta_d_equal	Logical. When TRUE, all free diagonal elements of theta_d are constrained to be equal and estimated as a single shared parameter (theta_eq). Ignored if no diagonal elements are free.
theta_l_free	Logical matrix indicating which strictly-lower-triangular elements of theta_l are free. Ignored if theta_diag = TRUE.
theta_l_values	Numeric matrix of starting values for the strictly-lower-triangular elements of theta_l. If NULL, defaults to a null matrix.
theta_l_lbound	Numeric matrix with lower bounds for theta_l. If NULL, no lower bounds are set.
theta_l_ubound	Numeric matrix with upper bounds for theta_l. If NULL, no upper bounds are set.
mu0_fixed	Logical. If TRUE, the initial mean vector mu0 is fixed. If FALSE, mu0 is estimated.
mu0_func	Logical. If TRUE and mu0_fixed = TRUE, mu0 is fixed to $(I - \beta)^{-1}\alpha$.

`mu0_free` Logical vector indicating which elements of `mu0` are freely estimated.

`mu0_values` Numeric vector of values for `mu0`. If `mu0_fixed = TRUE`, these are fixed values. If `mu0_fixed = FALSE`, these are starting values. If `NULL`, defaults to a vector of zeros.

`mu0_lbound` Numeric vector of lower bounds for `mu0`. If `NULL`, no lower bounds are set. Ignored if `mu0_fixed = TRUE`.

`mu0_ubound` Numeric vector of upper bounds for `mu0`. If `NULL`, no upper bounds are set. Ignored if `mu0_fixed = TRUE`.

`sigma0_fixed` Logical. If `TRUE`, the initial covariance matrix `sigma0` is fixed. If `FALSE`, `sigma0` is estimated.

`sigma0_func` Logical. If `TRUE` and `sigma0_fixed = TRUE`, `sigma0` is fixed to $(I-\beta\otimes\beta)^{-1}\mathrm{Vec}(\Psi)$.

`sigma0_diag` Logical. If `TRUE`, `sigma0` is diagonal. If `FALSE`, `sigma0` is symmetric.

`sigma0_d_free` Logical vector indicating free/fixed status of the elements of `sigma0_d`. If `NULL`, all element of `sigma0_d` are free.

`sigma0_d_values`
Numeric vector with starting values for `sigma0_d`. If `NULL`, defaults to a vector of ones.

`sigma0_d_lbound`
Numeric vector with lower bounds for `sigma0_d`. If `NULL`, no lower bounds are set.

`sigma0_d_ubound`
Numeric vector with upper bounds for `sigma0_d`. If `NULL`, no upper bounds are set.

`sigma0_l_free` Logical matrix indicating which strictly-lower-triangular elements of `sigma0_l` are free. Ignored if `sigma0_diag = TRUE`.

`sigma0_l_values`
Numeric matrix of starting values for the strictly-lower-triangular elements of `sigma0_l`. If `NULL`, defaults to a null matrix.

`sigma0_l_lbound`
Numeric matrix with lower bounds for `sigma0_l`. If `NULL`, no lower bounds are set.

`sigma0_l_ubound`
Numeric matrix with upper bounds for `sigma0_l`. If `NULL`, no upper bounds are set.

`tries_explore` Integer. Number of extra tries for the wide exploration phase using `OpenMx::mxTryHardWideSearch()` with `checkHess = FALSE`.

`tries_local` Integer. Number of extra tries for local polishing via `OpenMx::mxTryHard()` when gradients remain above tolerance.

`max_attempts` Integer. Maximum number of remediation attempts after the first Hessian computation fails the criteria. Each attempt may nudge off bounds, refit locally without the Hessian, and, on the last attempt, relax bounds.

`grad_tol` Numeric. Tolerance for the maximum absolute gradient. Smaller values are stricter.

hess_tol	Numeric. Minimum allowable Hessian eigenvalue. Smaller values are less strict.
eps	Numeric. Proximity threshold to detect parameters on their bounds and to nudge them inward by 10 * eps.
factor	Numeric. Multiplicative factor to relax parameter bounds on the final remediation attempt. Lower bounds are divided by factor and upper bounds are multiplied by factor.
overwrite	Logical. If TRUE, existing intermediate files are overwritten. Defaults to FALSE.
path	Character string. Directory in which to save intermediate files.
prefix	Alphanumeric character string. Prefix to use when naming intermediate files.
seed	Random seed for reproducibility.
quiet	Logical. If TRUE, suppresses messages during the model fitting stage.
ncores	Positive integer. Number of cores to use.
clean	Logical. If TRUE, clean intermediate files saved in path.

Details

The measurement model is given by

$$\mathbf{y}_{i,t} = \boldsymbol{\nu} + \boldsymbol{\Lambda}\boldsymbol{\eta}_{i,t} + \boldsymbol{\varepsilon}_{i,t}, \quad \text{with} \quad \boldsymbol{\varepsilon}_{i,t} \sim \mathcal{N}(\mathbf{0}, \boldsymbol{\Theta})$$

where $\mathbf{y}_{i,t}$, $\boldsymbol{\eta}_{i,t}$, and $\boldsymbol{\varepsilon}_{i,t}$ are random variables and $\boldsymbol{\nu}$, $\boldsymbol{\Lambda}$, and $\boldsymbol{\Theta}$ are model parameters. $\mathbf{y}_{i,t}$ represents a vector of observed random variables, $\boldsymbol{\eta}_{i,t}$ a vector of latent random variables, and $\boldsymbol{\varepsilon}_{i,t}$ a vector of random measurement errors, at time t and individual i. $\boldsymbol{\Lambda}$ denotes a matrix of factor loadings, and $\boldsymbol{\Theta}$ the covariance matrix of $\boldsymbol{\varepsilon}$. In this model, $\boldsymbol{\Lambda}$ is an identity matrix and $\boldsymbol{\Theta}$ is a diagonal matrix.

The dynamic structure is given by

$$\boldsymbol{\eta}_{i,t} = \boldsymbol{\alpha} + \boldsymbol{\beta}\boldsymbol{\eta}_{i,t-1} + \boldsymbol{\zeta}_{i,t}, \quad \text{with} \quad \boldsymbol{\zeta}_{i,t} \sim \mathcal{N}(\mathbf{0}, \boldsymbol{\Psi})$$

where $\boldsymbol{\eta}_{i,t}$, $\boldsymbol{\eta}_{i,t-1}$, and $\boldsymbol{\zeta}_{i,t}$ are random variables, and $\boldsymbol{\alpha}$, $\boldsymbol{\beta}$, and $\boldsymbol{\Psi}$ are model parameters. Here, $\boldsymbol{\eta}_{i,t}$ is a vector of latent variables at time t and individual i, $\boldsymbol{\eta}_{i,t-1}$ represents a vector of latent variables at time $t-1$ and individual i, and $\boldsymbol{\zeta}_{i,t}$ represents a vector of dynamic noise at time t and individual i. $\boldsymbol{\alpha}$ denotes a vector of intercepts, $\boldsymbol{\beta}$ a matrix of autoregression and cross regression coefficients, and $\boldsymbol{\Psi}$ the covariance matrix of $\boldsymbol{\zeta}_{i,t}$.

Value

Returns an object of class dtvarmxid which is a list with the following elements:

call Function call.

args List of function arguments.

fun Function used ("FitDTVARMxID").

output A list of fitted OpenMx models.

LDL *LDL' Decomposition of a Symmetric Positive-Definite Matrix*

Description

Performs an LDL' factorization of a symmetric positive-definite matrix X, such that

$$X = LDL^\top,$$

where L is unit lower-triangular (ones on the diagonal) and D is diagonal.

Usage

```
LDL(x)
```

Arguments

x	Numeric matrix. Must be symmetric positive-definite.

Details

This function returns both the unit lower-triangular factor L and the diagonal factor D. The strictly lower-triangular part of L is also provided for convenience. The function additionally computes an unconstrained vector `d_uc` such that `softplus(d_uc) = d_vec`, using $\mathrm{softplus}^{-1}(y) = \log(\exp(y) - 1)$ for stable back-transformation.

Value

A list with components:

`l_mat_unit`	Unit lower-triangular matrix L.
`l_mat_strict`	Strictly lower-triangular part of L.
`d_mat`	Diagonal matrix D.
`d_vec`	Vector of diagonal entries of D.
`d_uc`	Unconstrained vector with $\mathrm{softplus}(d\_uc) = d\_vec$.
`x`	Original input matrix.
`y`	Reconstructed matrix $LDL^\top$.
`diff`	Difference `x - y`.

See Also

Other DTVAR Functions: `FitDTVARMxID()`, `Softplus()`

Examples

```
set.seed(123)
A <- matrix(rnorm(16), 4, 4)
S <- crossprod(A) + diag(1e-6, 4) # SPD
out <- LDL(S)
max(abs(out$diff))
```

`print.dtvarmxid` *Print Method for Object of Class* `dtvarmxid`

Description

Print Method for Object of Class `dtvarmxid`

Usage

```
## S3 method for class 'dtvarmxid'
print(
  x,
  means = FALSE,
  alpha = TRUE,
  beta = TRUE,
  nu = TRUE,
  psi = TRUE,
  theta = TRUE,
  converged = TRUE,
  grad_tol = 0.01,
  hess_tol = 1e-08,
  vanishing_theta = TRUE,
  theta_tol = 0.001,
  ...
)
```

Arguments

x	an object of class dtvarmxid.
means	Logical. If means = TRUE, return means. Otherwise, the function returns raw estimates.
alpha	Logical. If alpha = TRUE, include estimates of the alpha vector, if available. If alpha = FALSE, exclude estimates of the alpha vector.
beta	Logical. If beta = TRUE, include estimates of the beta matrix, if available. If beta = FALSE, exclude estimates of the beta matrix.
nu	Logical. If nu = TRUE, include estimates of the nu vector, if available. If nu = FALSE, exclude estimates of the nu vector.
psi	Logical. If psi = TRUE, include estimates of the psi matrix, if available. If psi = FALSE, exclude estimates of the psi matrix.
theta	Logical. If theta = TRUE, include estimates of the theta matrix, if available. If theta = FALSE, exclude estimates of the theta matrix.
converged	Logical. Only include converged cases.
grad_tol	Numeric scalar. Tolerance for the maximum absolute gradient.
hess_tol	Numeric scalar. Tolerance for Hessian eigenvalues; eigenvalues must be strictly greater than this value.
vanishing_theta	Logical. Test for measurement error variance going to zero.
theta_tol	Numeric. Tolerance for vanishing theta test.
...	further arguments.

`Softplus` *Softplus and Inverse Softplus Transformations*

Description

The softplus transformation maps unconstrained real values to the positive real line. This is useful when parameters (e.g., variances) must be strictly positive. The inverse softplus transformation recovers the unconstrained value from a positive input.

Usage

```
Softplus(x)

InvSoftplus(x)
```

Arguments

`x`	Numeric vector or matrix. Input values to be transformed.

Details

- `Softplus(x)` = `log(1 + exp(x))`
- `InvSoftplus(x)` = `log(exp(x) - 1)`

For numerical stability, these functions use `log1p()` and `expm1()` internally.

Value

- `Softplus()`: numeric vector or matrix of strictly positive values.
- `InvSoftplus()`: numeric vector or matrix of unconstrained values.

summary.dtvarmxid *Summary Method for Object of Class* dtvarmxid

---

Description

Summary Method for Object of Class dtvarmxid

Usage

```
## S3 method for class 'dtvarmxid'
summary(
  object,
  means = FALSE,
  alpha = TRUE,
  beta = TRUE,
  nu = TRUE,
  psi = TRUE,
  theta = TRUE,
  converged = TRUE,
  grad_tol = 0.01,
  hess_tol = 1e-08,
  vanishing_theta = TRUE,
  theta_tol = 0.001,
  ...
)
```

Arguments

object	an object of class dtvarmxid.
means	Logical. If means = TRUE, return means. Otherwise, the function returns raw estimates.
alpha	Logical. If alpha = TRUE, include estimates of the alpha vector, if available. If alpha = FALSE, exclude estimates of the alpha vector.
beta	Logical. If beta = TRUE, include estimates of the beta matrix, if available. If beta = FALSE, exclude estimates of the beta matrix.
nu	Logical. If nu = TRUE, include estimates of the nu vector, if available. If nu = FALSE, exclude estimates of the nu vector.
psi	Logical. If psi = TRUE, include estimates of the psi matrix, if available. If psi = FALSE, exclude estimates of the psi matrix.
theta	Logical. If theta = TRUE, include estimates of the theta matrix, if available. If theta = FALSE, exclude estimates of the theta matrix.
converged	Logical. Only include converged cases.

grad_tol	Numeric scalar. Tolerance for the maximum absolute gradient.
hess_tol	Numeric scalar. Tolerance for Hessian eigenvalues; eigenvalues must be strictly greater than this value.
vanishing_theta	Logical. Test for measurement error variance going to zero.
theta_tol	Numeric. Tolerance for vanishing theta test.
...	further arguments.

`vcov.dtvarmxid` *Sampling Covariance Matrix of the Parameter Estimates*

Description

Sampling Covariance Matrix of the Parameter Estimates

Usage

```
## S3 method for class 'dtvarmxid'
vcov(
  object,
  alpha = TRUE,
  beta = TRUE,
  nu = TRUE,
  psi = TRUE,
  theta = TRUE,
  converged = TRUE,
  grad_tol = 0.01,
  hess_tol = 1e-08,
  vanishing_theta = TRUE,
  theta_tol = 0.001,
  ...
)
```

Arguments

object	Object of class `dtvarmxid`.
alpha	Logical. If `alpha = TRUE`, include estimates of the `alpha` vector, if available. If `alpha = FALSE`, exclude estimates of the `alpha` vector.
beta	Logical. If `beta = TRUE`, include estimates of the `beta` matrix, if available. If `beta = FALSE`, exclude estimates of the `beta` matrix.
nu	Logical. If `nu = TRUE`, include estimates of the `nu` vector, if available. If `nu = FALSE`, exclude estimates of the `nu` vector.

psi	Logical. If psi = TRUE, include estimates of the psi matrix, if available. If psi = FALSE, exclude estimates of the psi matrix.
theta	Logical. If theta = TRUE, include estimates of the theta matrix, if available. If theta = FALSE, exclude estimates of the theta matrix.
converged	Logical. Only include converged cases.
grad_tol	Numeric scalar. Tolerance for the maximum absolute gradient.
hess_tol	Numeric scalar. Tolerance for Hessian eigenvalues; eigenvalues must be strictly greater than this value.
vanishing_theta	Logical. Test for measurement error variance going to zero.
theta_tol	Numeric. Tolerance for vanishing theta test.
...	additional arguments.

Value

Returns a list of sampling variance-covariance matrices.
